Attention Deficit Disorder (ADD)

HSU Student Health Center has in recent years seen an increase in inquiries about Adult ADD, as well as in numbers of students already diagnosed with Adult ADD. This sheet is intended for students who are in need of ongoing treatment, or who want to know more about it.

Attention Deficit Disorder in adults is a treatable medical disorder, affecting as many as 50% of those who had ADD in childhood. It leads to chronic difficulties with attention and/or hyperactivity, which first begin in early childhood. If untreated, it can significantly impair a person's ability to function in a college setting, especially tasks involving organization, concentration, and emotional stability. It is often accompanied by other psychiatric problems, including substance abuse. It is thought to be undiagnosed in a significant number of those who have it, although misconceptions about adult ADD often lead to mistaken self-diagnosis.

At present, HSU Student Health Center does not offer diagnosis of ADD, and can only offer treatment for ADD with a single medicine called Strattera (see later in paragraph). This is because of a combination of factors, including the fact that the most effective and popular treatment for ADD, namely stimulant medications such as Ritalin, Adderall, or Concerta, are controlled substances with a significant potential for abuse. This makes them difficult to safely prescribe and monitor in a campus setting. Several other state university student health services who do manage ADD have experienced problems recently with misuse and illegal sale of these medications, in some instances resulting in death. A newer medicine named Strattera, which is not related to amphetamines, is now available for treatment of ADD; while it appears to be helpful in a smaller number of patients, it is not a controlled substance. Some of the physicians at HSU Student Health will consider managing patients with ADD on this medicine.

We advise students in need of diagnosis and/or treatment of Adult ADD to contact one of the limited numbers of providers in the community, listed on the back, who do provide these services. Be aware that these providers are often extremely busy, and may limit the number of patients they see, or have long waiting lists. We suggest contacting them as early as possible. Those students already on medication may need to arrange follow-up visits with the out-of-area providers who have previously prescribed their medications, until an appointment becomes available locally. Student Health can arrange a referral if needed.

(See other side for information)

ADD ASSESSMENT RESOURCES

Assessment Only:

Andrew Renouf, PhD
3015 Hubbard Ln.
Eureka, Ca. 95501
707-269-7011

Michael Ramirez, Psy.D
417 2nd St.
Eureka, Ca. 95501
707-442-5610

Jan Paulus, MS, LEP
3009 Hubbard Ln., Suite F
Eureka, Ca. 95501
707-442-8648

Assessment & Medication:

Robert Soper, MD
517 3rd St., Suite 5
Eureka, Ca. 95501
707-445-4705
